EXPLANATORY NOTES

Introduction

This publication contains quarterly and annual statistics of industrial disputes. Monthly figures for the same periods have previously been published in less detail in the monthly *Industrial Disputes, Australia* (6321.0).

- 2. The quarterly and annual statistics of industrial disputes according to duration, cause, method of settlement, analysis by number of workers involved, and analysis by total working days lost shown in Tables 5 to 12 refer to disputes which ended in the period, irrespective of when they commenced. They may differ from quarterly and annual figures in Tables 1 to 4 and 13 to 15 which refer to all disputes that started or were in progress during the period, irrespective of whether they had ended during the reference period or continued into the next period.
- 3. The statistics of industrial disputes are compiled according to the Australian Standard Industrial Classification (ASIC), described in Australian Standard Industrial Classification, 1978 Edition, Vol. 1 (1201.0). Prior to 1980 the statistics were compiled using the Preliminary Edition, 1969.

Coverage

- 4. The statistics relate only to disputes involving stoppages of work of ten man-days or more at the establishments where the stoppages occurred.
- 5. The figures of working days and wages lost relate to the losses due to industrial disputes (as defined in paragraph 9) and not to aggregate losses for the economy as a whole. For example, effects on other establishments, such as stand downs because of lack of materials, disruption of transport services, power cuts, etc. are not measured by these figures. Also, some workers involved in industrial disputes may obtain work at other establishments while a dispute is in progress. It is also possible that some or all of the total man-days and wages lost in any particular dispute may be made up through working longer hours or increasing the work force at other establishments, or at the establishments involved in the dispute after work has resumed.
- 6. Reports of stoppages of work are obtained from (a) employers and trade unions, (b) government departments and authorities, (c) State and Federal industrial arbitration authorities, and (d) trade journals, employer and trade union publications and newspapers. The statistics of industrial disputes are compiled mainly from data obtained from employers (both private and government) and trade unions concerning individual disputes and from reports of government authorities. Particulars of some stoppages (for example, those involving a large number of establishments) may have been estimated and the statistics therefore should be regarded as giving only a broad measure of the extent of industrial disputes (as defined).
- 7. Stoppages of work occurring at different times and at different establishments, but due to the same cause may be regarded as one industrial dispute. However, an industrial dispute occurring in more than one State or Territory is counted as a separate dispute in each State or Territory. A dispute involving workers in more than one industry in a State or Territory is counted only once in the number of disputes-in the industry that has the largest number of workers involved; but workers involved, working days lost and estimated loss in wages are allocated to their respective industries.
- 8. For statistics of industrial disputes for earlier periods see *Labour Statistics*, Australia, 1979 (6101.0) and earlier issues of this publication.

Definitions

9. For these statistics an *industrial dispute* is defined as a withdrawal from work by a group of employees or a refusal by an employer or a number of employers to permit some or all of their employees to work, each withdrawal or refusal being made in order to enforce a demand, to resist a demand, or to express a grievance. Stoppages of work not directly connected with terms and conditions of employment (e.g. political matters, fining and gaoling of persons) are included in the statistics.

of work (e.g. decleuse in

- 10. Workers directly and indirectly involved refer to wage and salary earners only. Excluded are persons who are self-employed (e.g. building sub-contractors, owner-drivers of trucks) and employers.
- 11. Workers directly involved are those who actually participated in the dispute in order to enforce or resist a demand or to express a grievance.
- 12. Workers indirectly involved are those thrown out of work at the establishments where the stoppages occurred, but who are not themselves parties to the dispute. Workers thrown out of work at establishments other than those where the stoppages occurred are excluded. (See paragraph 5.)
- 13. Total workers involved for any period of time are obtained by adding together the number of workers involved in each dispute in the period. For any period of time the figures may include details of the same workers involved in more than one dispute. The longer the period of reference the more chance there is of some double counting in the number of workers involved. Where there are varying numbers of employees involved during the progress of a dispute the figures of workers involved included in the statistics relate to the largest number of individual workers involved on any one day.
- 14. Working days lost refer to man-days lost by workers directly and indirectly involved in the dispute and figures are generally as reported by parties to the dispute. For some diputes working days lost are estimated on the basis of the number of workers involved and the duration of the dispute.
- 15. Estimated loss in wages represents the amount of wages and salaries lost by workers directly and indirectly involved in the dispute and the amount is generally reported by parties to the dispute. In some cases the loss in wages is estimated on the basis of working days (or hours) lost and the estimated average daily (or hourly) wage or salary of the employees involved. For some disputes there is no loss in wages.

Causes

16. The statistics of causes of industrial disputes relate to the direct causes of stoppages of work. The figures therefore do not reflect the relative importance of all causes of dispute between employers and employees. The classification of causes is as follows:

Wages. Claims involving general principles relating to wages (e.g. increase (decrease) in wages; variation in method of payment) or combined claims relating to wages, hours or conditions of work (in which the claim about wages is deemed to be the most important; combined claims in which other claims are deemed to be the most important are included under other causes).

Hours of work. Claims involving general principles relating State legislation. to hours of work (e.g. decrease (increase) in hours; spread of hours).

Leave, pensions, compensation provisions, etc. Claims involving general principles relating to holiday and leave provisions; pension and retirement provisions; workers' compensation provisions; insertion of penal clause provisions in awards; etc.

Managerial policy. Disputes concerning the managerial policy of employers-computation of wages, hours, leave, etc. in individual cases; docking pay, docking leave credits, fines, etc.; disciplinary matters including dismissals, suspension, victimisation; principles of promotion and filling positions, transfers, roster complaints, retrenchment policy; employment of particular persons and personal disagreements; production limitations or quotas; etc.

Physical working conditions. Disputes concerning physical working conditions-safety issues; protective clothing and equipment; first aid services; uncomfortable working conditions, etc.; lack of, or the conditions of, amenities; claims for assistance; shortage or poor distribution of equipment or material; condition of equipment; new production methods and equipment; arduous physical tasks; etc.

Trade unionism. Disputes concerning-employment of nonunionists; inter-union and intra-union disputes; sympathy stoppages in support of employees in another industry; recognition of union activities; etc.

Other. Disputes concerning-protests directed against persons or situations other than those relating to the employer/employee relationship, i.e. political matters, fining and gaoling of persons, protests against lack of work, and lack of adequate transport; non-award public holidays; accidents and funerals; no reason given for stoppages; etc.

Methods of settlement

17. Statistics of the method of settlement of industrial disputes relate to the method directly responsible for ending the stoppage of work and not necessarily to the method (or methods) responsible for settling all matters in dispute. For these reasons they do not reflect the relative importance of the work of authorities operating under State and Federal legislation. The classification of methods of settlement is as follows:

Negotiation. Private negotiation between the parties involved, or their representatives, without the intervention or assistance of authorities constituted under State or Federal industrial legislation.

Mediation. The arbitration or mediation of persons whose intervention or assistance is not based on State or Federal industrial legislation. dated colored rengit of the transfer the colored the colored to the

⁽a) See note (a) to Table 11 above.

WORKING DAYS LOST PER THOUSAND EMPLOYEES

The figures of working days lost used in these compilations are those lost by workers directly and indirectly involved in disputes involving stoppages of work of ten man-days or more in the establishments where the stoppages occurred. For Australia the figures have been calculated on two bases: (a) for all disputes, (b) for disputes coded to all causes except "other" in Table 8, or its equivalent, each year. Working days lost in agriculture, etc. and in private households employing staff have been excluded.

2. Estimates for 1972 to 1979 are based on estimates of employees as published in *Civilian Employees, Australia* (6213.0). As this series was suspended from April 1980, estimates for 1980 have been calculated by using estimates of employees from the labour force survey. For purposes of comparison figures for 1979 have been shown on both bases.

MAJOR INDUSTRIAL DISPUTES IN 1980

Table 15 contains information on major industrial disputes in Australia in 1980, a major dispute being defined as one in which 10,000 or more working days were lost throughout Australia. There were 45 such disputes in 1980 involving 640,300 workers (55 per cent of the total for the year), who lost 2,198,700 working days (66 per cent of the total). The number of disputes mentioned differs from that shown in previous tables, in which a dispute is counted in each State or Territory in which it occurs.

2. Table 15 gives particulars of individual disputes grouped by industry according to sub-divisions of ASIC. Industries in which no major dispute occurred are not shown. Disputes involving workers in more than one industry are shown in the first part of the table, and where workers in more than one State or Territory were involved this is indicated.

- 3. For reasons of confidentiality, complete details of major stoppages involving only one or a small number of employers cannot be given. However, these disputes have been listed in the relevant part of the table.
- 4. The figures of workers involved and working days lost relate to workers directly and indirectly involved in the stoppages during 1980. Workers indirectly involved are those thrown out of work at the establishments where the stoppages occurred but who are not themselves parties to the dispute. The figures of workers involved may include workers who have been involved in more than one major dispute in 1980 (see paragraph 13 of the Explanatory notes).
- 5. Particulars of some stoppages (e.g. those involving a large number of establishments) have been estimated and the statistics therefore should be regarded as giving a broad measure of the size of individual disputes (as defined).
- 6. For more general information and definitions concerning these statistics see the Explanatory notes.
